

## **IT and Communications Review**

LOCS principals are well experienced and up to date with all aspects of an operation or business IT and communications requirements.

LOCS understands the dilemma between utilising the 'latest and greatest' systems and having to introduce new skill sets to complement this and /or needing to enhance analysis required to compete effectively.

IT implementation should only be introduced after a thorough review of existing and future needs and in conjunction with an understanding of communication trends in society.

Specific attention needs to be paid to;

- Existing competency level of staff
- Level and cost of training required
- Common system use within the industry
- Changes to existing work methodology
- Perceived 'additional' work load
- System flexibility to provide required information
- Ease of use with other peripheral systems
- Industry specific v industry generic
- Flexibility of hardware
- Future system growth.

Hardware and installation whilst costly and very important are secondary to ensuring the right system is installed the right way.

LOCS knowledge in communications channels and the dual linkage to the internet and systems has been finely tuned through openings, changeovers and upgrades in remote conditions requiring innovative solutions.
